

INSTALLATION MANUAL – BEX-WMT

Adjustable Head Wall Mount for BEX Series Explosion-Proof Housings

WARNING: Before beginning installation of this product, carefully review the safeguards and precautions found on page 2 of this manual.

Unpacking

Unpack carefully. This is mechanical equipment and should be handled with care. If an item appears to have been damaged in shipment, replace it properly in its carton and notify the shipper. If any items are missing, notify the shipper. The shipping carton is the safest container in which the unit may be transported. Save it for possible future use.

Service

If the unit ever needs repair service, the customer should contact Broadsight Systems, Inc. for a return materials authorization (RMA) and shipping instructions.

Care and Maintenance

Perform routine maintenance to keep the unit dust free.

Model Designation

BEX-WMT Adjustable Head Wall Mount for BEX Series Explosion-Proof Housings; Gray

Description

BEX series mounting equipment is designed to accommodate the weight of the largest housing (BEX-66205) and sunshield (BEX-SS-66205) plus an additional weight of 20 LBS (9.0kg) of equipment installed inside the housing. Each wall mount can be adjusted 60° above and below the horizon and rotated through 180°.

** Caution: Housing and mount must be installed in the orientation shown. Wall mount must be attached to a vertical surface. **

Hardware Kit

3x 5/16-18 Hex Head Bolts
1x 5/16-18 Hex Nut
4x 5/16" Flat Washers
4x 5/16" Lock Washers
2x 3/8-16 Hex Head Bolts
2x 3/8" Flat Washers
2x 3/8" Lock Washers

Figure 1 - BEX-6620 Housing w/ BEX-SS-66205 Sunshield, BEX-WMT Wall Mount, and BEX-PM Pole Mount

Tools Required

9/16" Socket
1/2" Socket
Torque wrench (range 11 FT-LBS to 20 FT-LBS)
Appropriate customer-supplied mounting fasteners
Appropriate tools to install mounting fasteners
RTV Sealant (optional)

Certification

Installations of Explosion-Proof equipment should be performed by a licensed professional and conform to the National Electrical Code (NEC) and any applicable local codes.

Installation

1. Remove mount from packaging. The adjustable head ships detached from the mount. Attach the adjustable head to the housing base as shown using three (3) 5/16-18 hex head bolts, (3) 5/16" washers and (3) 5/16" lock washers provided in the hardware kit. Tighten to 11 FT-LBS.
2. Hold the wall mount's base up to installation surface and use as a template to mark the hole pattern.
3. Drill out installation surface with appropriate sized drill bit for fasteners and anchors being used.
4. If desired, apply a bead of RTV sealant around the flange of the mount that contacts the wall.
5. Attach mount to installation surface using customer-supplied fasteners (max 1/2" diameter). Each fastener should have a minimum 300 lbs pull-out strength.
6. Place the housing and adjustable head assembly onto the mount; orient the threaded stud through the central hole in the adjustable head.
7. From the hardware kit, place a 5/16" flat washer and lock washer onto the stud, then thread the 5/16-18 hex nut onto the stud. Tighten to 11 FT-LBS.
8. Install three (2) 3/8" washers and (2) 3/8" lock washers, and (2) 3/8-16 hex head bolts into the base of the adjustable head from beneath the wall mount base; leave finger tight.
9. Loosen hex nut. Orient housing as desired, then firmly tighten hex nut to 11 FT-LBS and all 3/8-16 hex bolts to a minimum of 20 FT-LBS.

IMPORTANT SAFEGUARDS

1. Read Instructions - All the safety and operating instructions should be read before the unit is operated.
2. Retain Instructions - The safety and operating instructions should be retained for future reference.
3. Heed Warnings - All warnings on the unit and in the operating instructions should be adhered to.
4. Follow Instructions - All operating and use instructions should be followed.
5. Cleaning - Unplug the unit from the outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.
6. Attachments - Do not use attachments not recommended by the product manufacturer as they may cause hazards.
7. Accessories - Do not place this unit on an unstable stand, tripod, bracket, or mount. The unit may fall, causing serious injury to a person and serious damage to the unit. Use only with a stand, tripod, bracket, or mount recommended by the manufacturer or sold with the product. Any mounting of the unit should follow the manufacturer's instructions and should use a mounting accessory recommended by the manufacturer.
 An appliance and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the appliance and cart combination to overturn.
8. Ventilation - Openings in the enclosure, if any, are provided for ventilation, to ensure reliable operation of the unit, and to protect it from overheating. These openings must not be blocked or covered. This unit should not be placed in a built-in installation unless proper ventilation is provided or the manufacturer's instructions have been adhered to.
9. Power Sources - This unit should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply you plan to use, consult your appliance dealer or local power company. For units intended to operate from battery power or other sources, refer to the operating instructions.
10. Grounding or Polarization - This unit may be equipped with a polarized alternating-current line plug (a plug having one blade wider than the other). This plug will fit into the power outlet only one way. This is a safety feature. If you are unable to insert the plug fully into the outlet, try reversing the plug. If the plug should still fail to fit, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the polarized plug. Alternatively, this unit may be equipped with a 3-wire grounding-type plug, a plug having a third (grounding) pin. This plug will only fit into a grounding-type power outlet. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the grounding-type plug.
11. Power Cord Protection - Power supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords and plugs, convenience receptacles, and the point where they exit from the appliance.
12. Power Lines - An outdoor system should not be located in the vicinity of overhead power lines or other electric light or power circuits or where it can fall into such power lines or circuits. When installing an outdoor system, extreme care should be taken to keep from touching such power lines or circuits as contact with them might be fatal. U.S.A. models only - refer to the National Electrical Code Article 820 regarding installation of CATV systems.
13. Overloading - Do not overload outlets and extension cords as this can result in a fire or electric shock.
14. Object and Liquid Entry - Never push objects of any kind into this unit through openings, as they may touch dangerous voltage points or short out parts that could result in a fire or electric shock. Never spill liquid of any kind on the unit.
15. Servicing - Do not attempt to service this unit yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.
16. Damage Requiring Service - Unplug the unit from the outlet and refer servicing to qualified service personnel under the following conditions:
 - a. When the power supply cord or plug is damaged.
 - b. If liquid has been spilled or objects have fallen into the unit.
 - c. If the unit has been exposed to rain or water.
 - d. If the unit does not operate normally by following the operating instructions. Adjust only those controls that are covered by the operating instructions, as an improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the unit to its normal operation.
 - e. If the unit has been dropped or the cabinet has been damaged.
 - f. When the unit exhibits a distinct change in performance--this indicates a need for service.
17. Replacement Parts - When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock, or other hazards.
18. Safety Check - Upon completion of any service or repairs to this unit, ask the service technician to perform safety checks to determine that the unit is in proper operating condition.
19. Coax Grounding - If an outside cable system is connected to the unit, be sure the cable system is grounded. U.S.A. models only--Section 810 of the National Electrical Code, ANSI/NFPA No.70-1981, provides information with respect to proper grounding of the mount and supporting structure, grounding of the coax to a discharge unit, size of grounding conductors, location of discharge unit, connection to grounding electrodes, and requirements for the grounding electrode.
20. Lightning - For added protection of this unit during a lightning storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet and disconnect the cable system. This will prevent damage to the unit due to lightning and power line surges.

FCC NOTICE

This equipment generates and uses radio frequency energy and if not installed and used properly, that is, in strict accordance with the manufacturer's instructions, may cause interference to radio and television reception. It has been type tested and found to comply with the limits for a Class B computing device in accordance with Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Relocate the monitor away from the TV/radio receiver.

Plug the monitor into a different wall outlet so that the console is on a different branch circuit.

Re-orient the TV/radio antenna.

If necessary, the user should consult the dealer or an experienced radio/television technician for additional suggestions.

NOTE: Changes or modifications to the unit may void FCC compliance.
